## ***Hard Manufacturing... Innovation & Reliability***

HARD Manufacturing's success is a result of over a century of delivery of high quality products and services to the increasingly sophisticated health care industry. Founded in 1876, HARD Manufacturing Company has seen its business grow and evolve with the times - supporting a booming population expansion, a dramatic acceleration of discovery and progress in medical science and technology, globalization of the economy, and the needs of an increasingly health-conscious and now aging population.

This family business, with consistent leadership for over 30 years, has been exceeding customer satisfaction through exceptional customer service, continuous process and quality improvement efforts and product leadership. All of our products are designed and built in our large manufacturing facility and worldwide headquarters in Buffalo, New York.

Knowing that even the finest line of hospital cribs and youth beds is only as good as the delivery and support services behind them, HARD has devoted increasing attention to bringing its products more rapidly to its customers. Staffed by qualified, responsive sales and service personnel, HARD promises prompt attention of specialists, quick delivery, and continued availability of spare parts.

Quality, Safety and Innovation are paramount to our future success. HARD has been a leader in innovation, offering over 50 different pediatric cribs and youth beds to meet our customer's various needs. Development of the patented gatch extender to prevent children from being entrapped in cribs typifies what a manufacturing specialist can accomplish in revolutionizing a product's performance. Customers with special needs have helped us develop Springfield Cribs, WeighSafe Crib Scales, Stockton Beds, and the Johns Hopkins Handle. HARD cribs and beds are available in manual or fully electric to accommodate different hospital needs and budgets.

HARD manufactures and markets the most complete line of pediatric healthcare furniture available, servicing all needs and price levels. The HARD commitment to quality, performance, and value for pediatric patients has never changed. Through continuing improvements and developing new solutions, the HARD goal is to maintain its earned position of leadership in the pediatric space.
